❖ Provision to launch Resource Histogram for EAM Work Orders

❖ **Description:**

This feature provides the Histogram view of work order – Resource scheduling information.

❖ **Feature Category:**

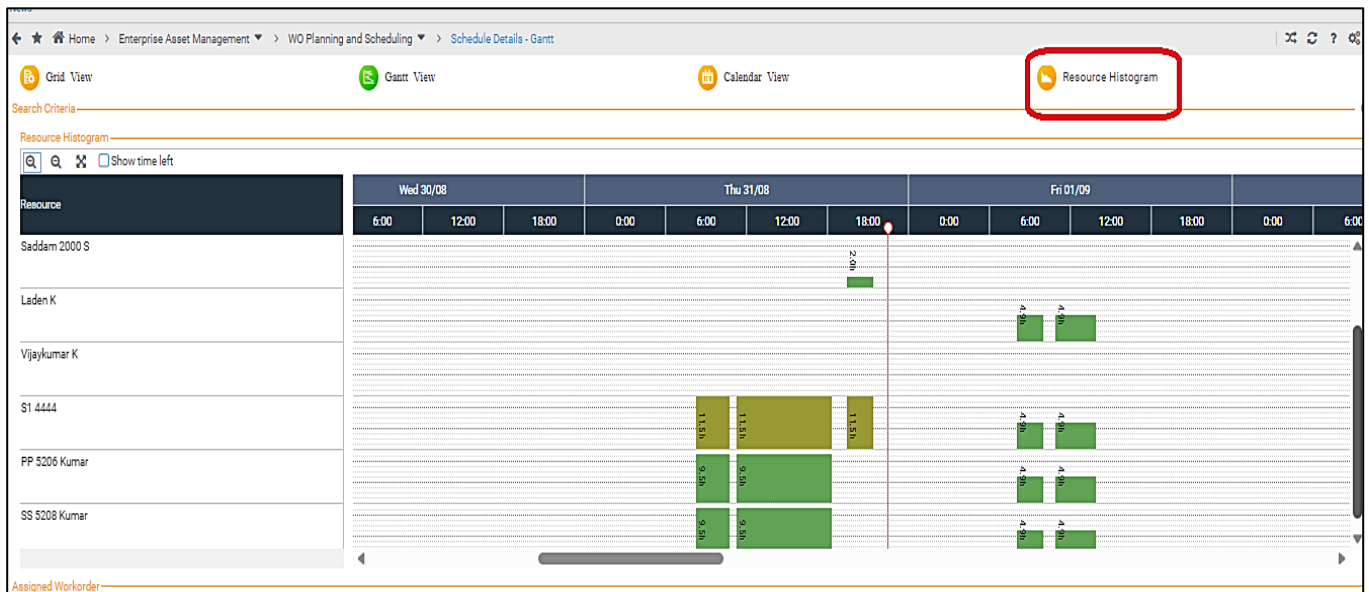

Core Functionality.

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Enterprise Asset Management → WO Planning and Scheduling → Schedule Details - Gantt

❖ **Screenshot:**❖ **Business Scenario:**

To get the pictorial view of Resource loading.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Purchase release slip details in work order service request references**❖ **Description:**

Whenever service PRs are auto generated from maintenance work orders and if such purchase requests are converted to release slip numbers, provision given to view details of purchase release slip numbers. By clicking the purchase release slip number data hyperlink, additional release slip details can be viewed.

❖ **Feature Category:**

Nil.

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Enterprise Asset Management > Work Order > Work Order Service Request References

Nil.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Provision to generate rental invoice based on loading/unloading rate**❖ **Description:**

In the case of equipment rental, in addition to the rental rate, there are possibilities of other charges such as mobilization, assembling, etc. Loading Rate is the charge applicable for loading the equipment/unit into truck for transporting to customer's place. Unloading Rate is the charge applicable for unloading the equipment/unit from truck for installation at customer's premises. In equipment quotation, rate can be captured for loading and unloading. Once service level agreement is generated from quotation, loading/unloading rate will be considered for billing. After approval of agreement, whenever service work orders are generated for invoicing, loading charges will reflect in the first billing cycle and unloading charges will be added to last billing cycle.

❖ **Feature Category:**

Nil.

❖ **Pre-Requisites:**

Service item mapping should be available for the entities 'Loading' and 'Unloading'.

❖ **Navigation:**

Sales and Shipping > Quotation > Maintain Equipment Quotation

Release Section

XII. Enterprise Asset Management

❖ Provision to view all financial Postings of Work Order transactions

❖ Description:

The proposed feature enhancement with a tree view structure in the financial overview of EAM Work Order pages responds to the need for a more comprehensive and organized representation of financial data. By improving financial visibility and facilitating efficient analysis, this enhancement contributes to better decision-making processes related to EAM Work Orders.

❖ Feature Category:

Core Functionality.

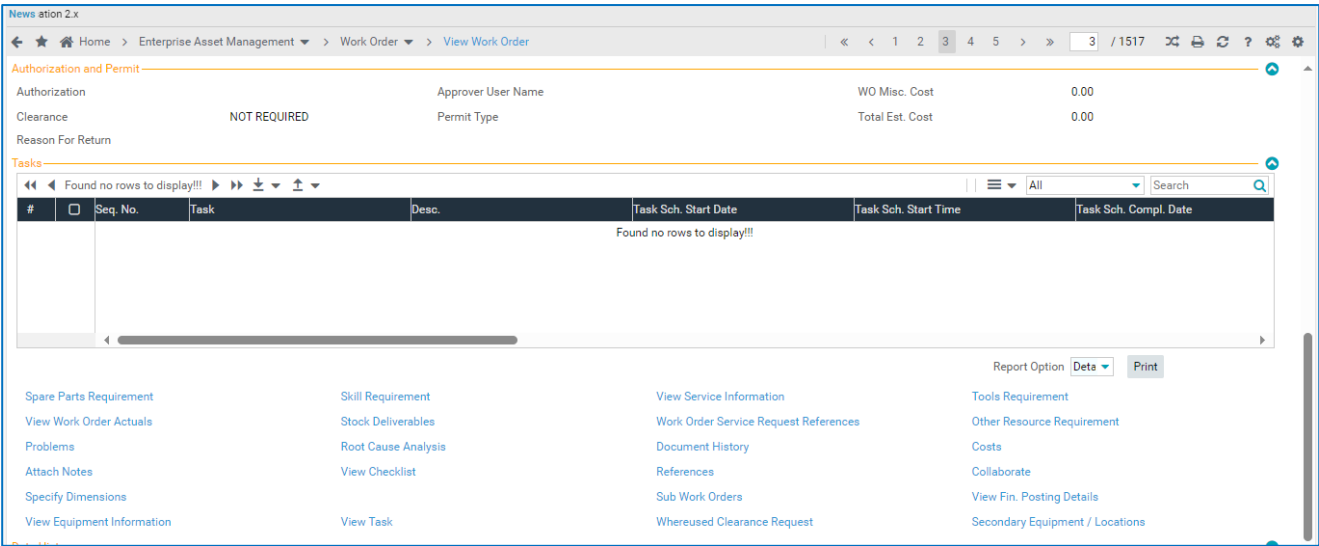

❖ Pre-Requisites:

Nil.

❖ Navigation:

Enterprise Asset Management → Work Order → View Work Order

❖ Screenshot:

❖ Business Scenario:

The business scenario of enhancing the financial overview in EAM Work Order pages addresses the practical need for a more organized and comprehensive representation of financial data. By introducing a tree view structure, the proposed feature facilitates efficient analysis and decision-making processes, ensuring that users

can gain valuable insights into the financial implications of multiple transactions associated with specific EAM Work Orders.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Provision to view all financial Postings of Service Work Order's transactions**

❖ **Description:**

The proposed feature enhancement with a tree view structure in the financial overview of Service Work Order pages responds to the need for a more comprehensive and organized representation of financial data. By improving financial visibility and facilitating efficient analysis, this enhancement contributes to better decision-making processes related to Service Work Orders.

❖ **Feature Category:**

Core Functionality.

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Enterprise Asset Management → Service Work Order → Close Service Work Order

❖ **Screenshot:**

The screenshot shows the 'Close Service Work Order' page in the VirtualWorks Enterprise Application 2.x. The page has a breadcrumb trail: Home > Enterprise Asset Management > Service Work Order > Close Service Work Order. The main form area contains the following fields and controls:

- Bill To Customer:** A text input field.
- Invoice No.:** A text input field.
- Basic Amount:** A text input field.
- Invoice Date:** A date picker showing 26/03/2024.
- Invoice Status:** A text input field.
- Tax Amount:** A text input field.
- Invoice Numbering Type:** A dropdown menu showing COBI.
- Total Amount:** A text input field.

At the bottom of the form, there are four buttons: **Save**, **Close**, **Print**, and **Generate Invoice**. Below the buttons, there are four links: **Tax Calculation - Summary**, **View Tax Calculation - Summary**, **Taxes Charges & Discount**, and **View Fin. Posting Details**.

❖ Business Scenario:

The business scenario of enhancing the financial overview in Service Work Order pages addresses the practical need for a more organized and comprehensive representation of financial data. By introducing a tree view structure, the proposed feature facilitates efficient analysis and decision-making processes, ensuring that users can gain valuable insights into the financial implications of multiple transactions associated with specific Service Work Orders.

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ Resource Utilization based on Resources mapped to EAM Work Orders**❖ Description:**

The proposed feature enhances the resource management capabilities within EAM (Enterprise Asset Management) Work Orders by introducing a pictorial representation of resource utilization. This visual tool provides a comprehensive view of how resources (employees) are allocated and utilized across the lifecycle of work orders, promoting optimized resource allocation, improved efficiency, and insights into workforce productivity.

❖ Feature Category:

Core Functionality.

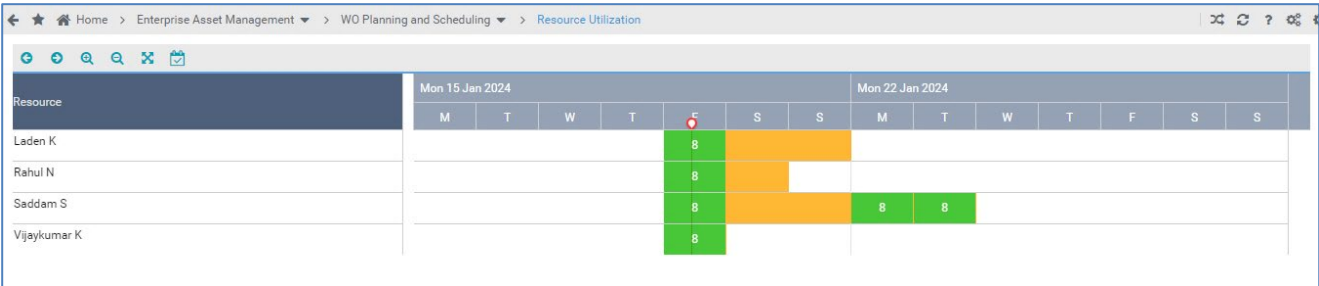

❖ Pre-Requisites:

Nil.

❖ Navigation:

Enterprise Asset Management → WO Planning and Scheduling → Resource Utilization

❖ Screenshot:

❖ Business Scenario:

The business scenario of enhanced workforce management in EAM Work Orders addresses practical challenges in resource allocation and utilization. By introducing a pictorial representation for resource utilization tracking across EAM (Enterprise Asset Management) Work Orders, the enhancement provides a visual and comprehensive view of how resources (employees) are allocated and utilized throughout the lifecycle of work orders. This feature aims to optimize the workforce management processes, leading to improved efficiency and strategic planning within the EAM framework.

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ Resource Histogram for EAM Service - Work Orders

❖ Description:

The proposed Service Work Order based Resource Histogram is designed to enhance resource management specifically for service work orders. By providing a focused and task-centric view of resource allocation, this feature aims to improve workforce planning.

❖ Feature Category:

Core Functionality.

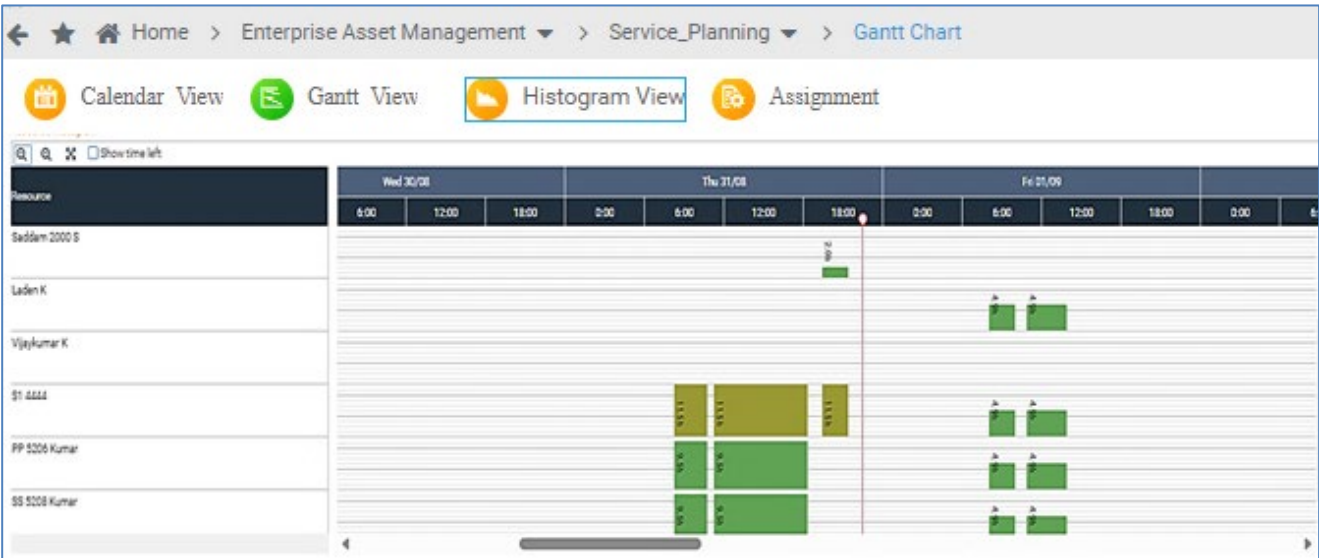

❖ Pre-Requisites:

Nil.

❖ **Navigation:**

Enterprise Asset Management → Service Planning → Gantt Chart

❖ **Screenshot:**

❖ **Business Scenario:**

The business case for optimizing resource allocation for service work orders with a dedicated Resource Histogram is designed to enhance resource management specifically for service work orders. This strategic enhancement aims to improve resource utilization, streamline service delivery processes, and ultimately contribute to the success of service-oriented businesses.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Service work order-based drag and drop to pick the resources. (Resource Assignment)**

❖ **Description:**

The proposed feature introduces a user-friendly and intuitive drag-and-drop resource assignment functionality within Service Work Orders. This enhancement empowers users to seamlessly assign resources to specific tasks, optimizing the workforce planning.

❖ **Feature Category:**

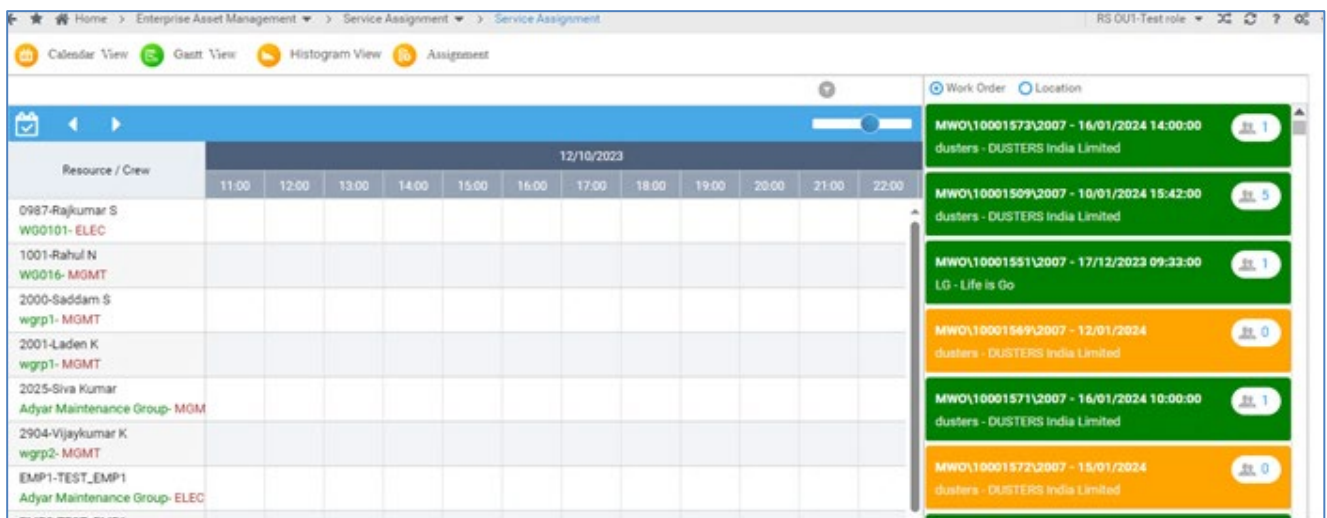

Core Functionality.

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Enterprise Asset Management → Service Assignment → Assignment

❖ **Screenshot:**❖ **Business Scenario:**

The proposed drag-and-drop resource assignment in Service Work Orders addresses the identified business case by offering a user-friendly solution to optimize workforce planning. By providing an intuitive interface for resource allocation, this feature contributes to improved efficiency, flexibility, and overall productivity in service delivery operations.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ Resource Utilization based on Resources mapped to EAM Service - Work Orders

❖ Description:

The proposed feature of pictorial resource utilization tracking in Service Work Orders brings a visual dimension to workforce management. By providing an intuitive and interactive representation, businesses can optimize resource allocation, enhance efficiency.

❖ Feature Category:

Core Functionality.

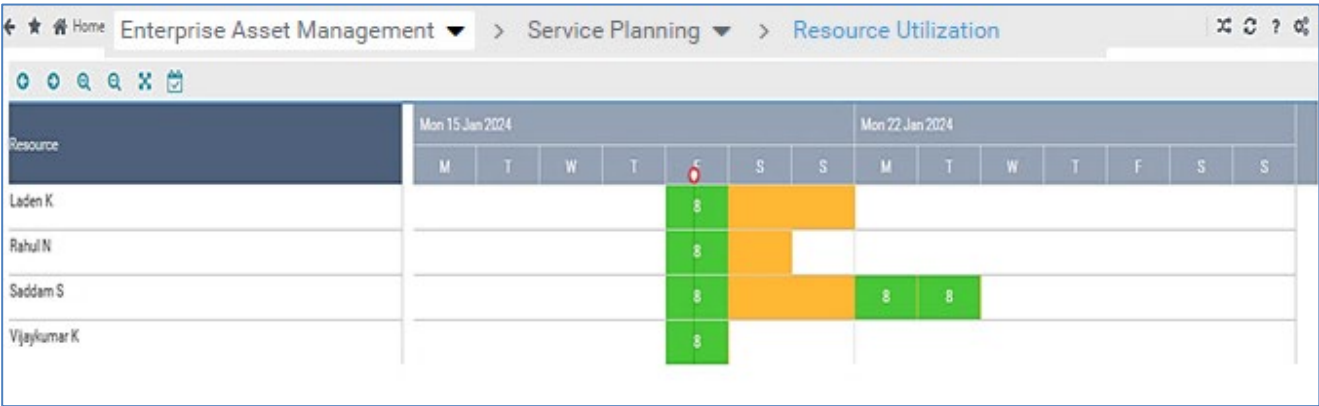

❖ Pre-Requisites:

Nil.

❖ Navigation:

Enterprise Asset Management → Service Workorder → Resource Utilization

❖ Screenshot:

❖ Business Scenario:

The business scenario of optimized workforce management in Service Work Orders addresses practical challenges in resource allocation and utilization for service delivery. This enhancement offers a comprehensive view of how resources (employees) are allocated and utilized throughout the lifecycle of a Service Work Order. Resources (employees) and their utilization across a timeline is depicted pictorially. By introducing a visual representation, businesses can optimize their workforce management processes, leading to improved efficiency and strategic planning within the context of Service Work Orders.

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ Problem-Causes & Resolutions in TSG

❖ Description:

Whenever any variation in resolution is required based on cause of the problem, resolutions can be defined for the combination of Problem – Cause code. All cause codes mapped to every problem code will be available for defining the resolutions. Resolutions can be attached directly to the problem code or for the combination of problem – cause code.

❖ Feature Category:

Core Functionality

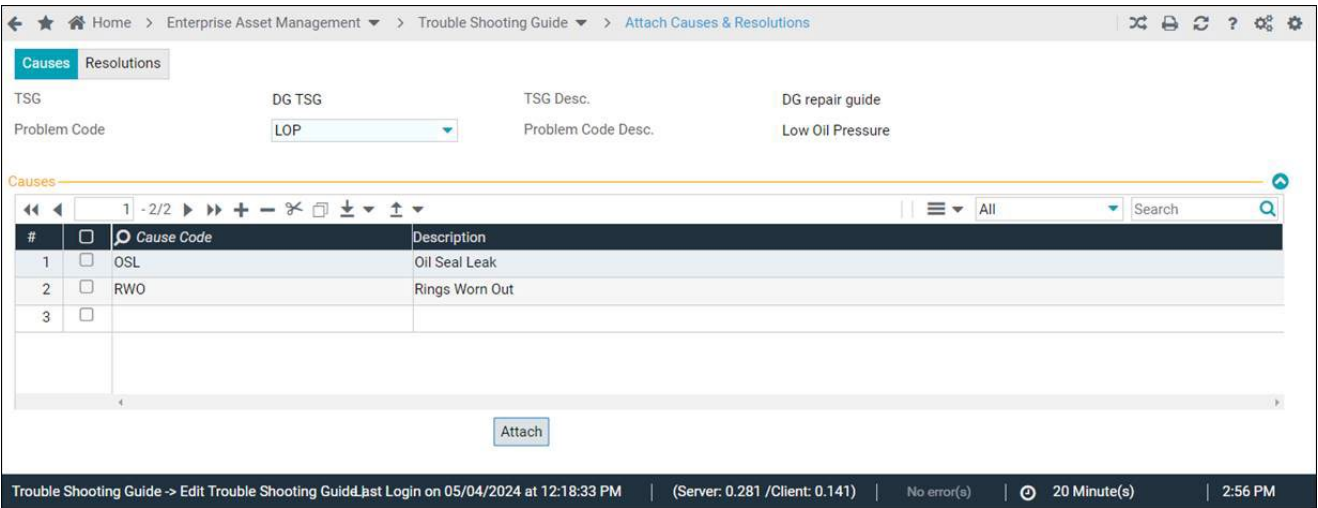

❖ Pre-Requisites:

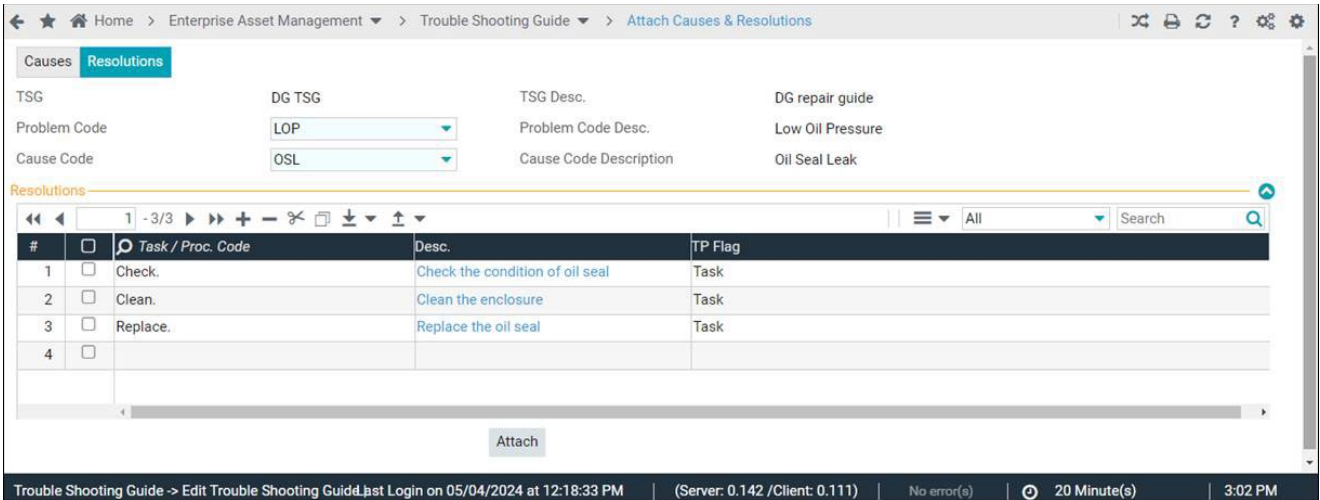

Nil.

❖ Navigation:

Enterprise Asset Management → Troubleshooting Guide → Associate Problem Codes → Attach Causes and Resolutions

❖ Screenshot:

❖ **Business Scenario:**

Whenever resolutions for problem identified in an equipment need to be provided based on root cause of the problem. For the same identified problem in machinery, the resolution might vary depends on the cause.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Workflow Approval History links in Workorder pages**

❖ **Description:**

Approval history can be viewed using Workflow Status data hyperlink from various pages of maintenance work order. At any point in time, creator will get an idea of with whom currently approval of work order is pending.

❖ **Feature Category:**

Usability

❖ **Pre-Requisites:**

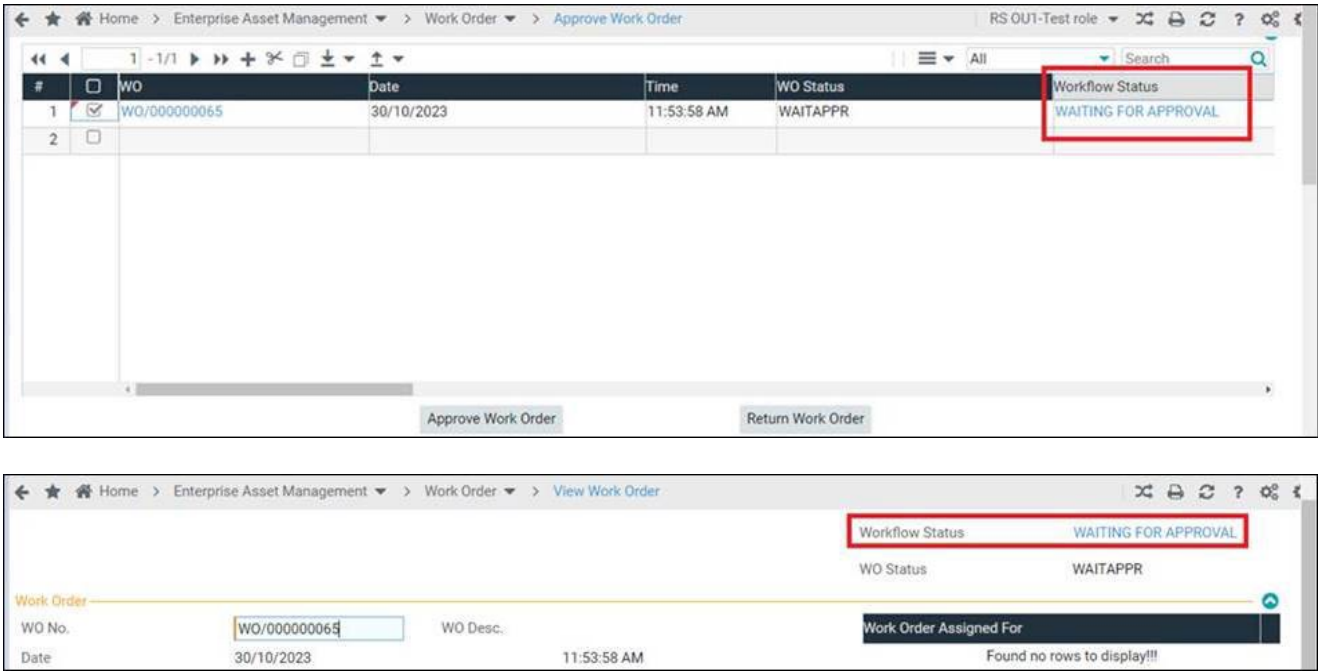

Workflow needs to be enabled for work order transaction and workflow configuration should be available.

❖ **Navigation:**

Enterprise Asset Management → Work Order > Create Work Order

Enterprise Asset Management → Work Order > Edit Work Order
Enterprise Asset Management → Work Order > Approve Work Order
Enterprise Asset Management → Work Order > View Work Order

❖ Screenshot:

❖ Business Scenario:

Whenever multilevel authorization is required before scheduling the work order.

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ Workflow Approval History link from Service Workorder

❖ Description:

Approval history can be viewed using Workflow Status data hyperlink of service work order. At any point in time, creator will get an idea of with whom currently approval of work order is pending.

❖ Feature Category:

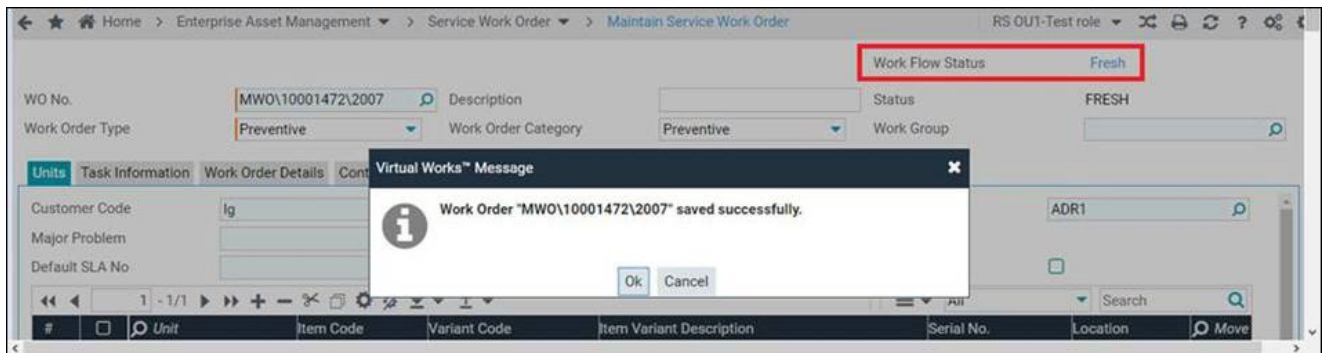

Usability

❖ Pre-Requisites:

Workflow needs to be enabled for work order transaction and workflow configuration should be available.

❖ Navigation:

Enterprise Asset Management → Service Work Order → Maintain Service Work Order

❖ Screenshot:**❖ Business Scenario:**

Whenever multilevel authorization is required before scheduling the work order.

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ AMC definition for Locations**❖ Description:**

Annual maintenance contract can be created for locations/combination of equipments and locations. Base price/parameter-based billing option can be set for location based AMC. Count of mapped locations will also be shown for various AMC revisions. Cumulative usage (as on current date) will be shown for locations which are part of AMC.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Nil.

❖ Navigation:

Enterprise Asset Management → Equipment Induction → Maintain AMC

XIII. Enterprise Asset Management

❖ Unit Master Enhancements

❖ Summary:

Unit master page has been enhanced with option for selection of unit classification and subclassification. Detailed description of unit can be captured; parent unit can be mapped along with attachment date information. Additionally, inactivation reason can be captured, if the unit is set as inactive.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Specification template needs to be defined for classifying the unit.

❖ Description:

Nil

❖ How to use it?

- Open the Maintain Unit activity.
- Choose the desired unit classification and subclassification from the provided dropdowns, enter a detailed description of the unit, and if applicable, map it to a parent unit along with the attachment date.
- If the unit is to be marked as inactive, select the appropriate inactivation reason and save the changes

❖ Business Scenario:

To establish the hierarchy between units parent unit information is needed. In addition to Unit Category, to classify the unit further, classification-subclassification information is needed.

❖ Limitations:

Nil

❖ Other Impact:

Nil

❖ Unit Barcode Generation

❖ Summary:

By specifying the search criteria, Bar code/QR code can be generated for multiple units. Required unit parameters can be selected for printing the bar code or QR code.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Parameters required for printing, needs to be configured

❖ Description:

Nil

❖ How to use it?

- Open the Barcode Generation activity.
- Execute the search criteria to generate the Bar code/QR code for multiple units.
- Select the units and execute the print command to produce the desired bar code or QR code output

❖ **Navigation:**

Inventory and PICC → Stock Maintenance → Barcode Generation

❖ **Screenshot:**

2								

❖ **Business Scenario:**

To view history of units, reporting of service work orders, scanning of barcode/QR code is needed in mobile applications.

❖ **Limitations:**

Nil

❖ **Other Impact:**

Nil

❖ **Service Level Agreement Enhancements**

❖ **Summary:**

For After Sales SLA, AMC agreement types will be displayed based on associated service level. If labour, spares and services are included in service level, Agreement Type will be shown as AMC – Comprehensive. If labour, spares and services are not included for service level, Agreement Type will be shown as AMC – Non

Comprehensive. Among service level attributes labour, spares and services, if any of the entity is not applicable, then Agreement Type will be shown as AMC – Semi Comprehensive.

Priority rules can be defined for service level agreement or for the combination of service level agreement & unit. Priority, response time and resolution time can be defined for type of customer call, problem, category and sub category.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Service levels need to be defined for the agreement type AMC to view various AMC types. Priority, Problem, Category and Sub-Category master data needs to be defined for priority rule definition.

❖ Description:

Nil

❖ How to use it?

- Open the Maintain Service Level Agreements activity for enhancing the SLAs.
- Open the Service Priority Details activity to define the priority rules for the SLAs.

❖ Navigation:

Enterprise Asset Management → Service Level Agreement → Maintain Service Level Agreements

Enterprise Asset Management → Service Level Agreement → Service Priority Details

❖ Screenshot:

The screenshot shows the 'Maintain Service Level Agreements' form. The top section contains fields for Agreement No. (SLA\0000168\2007), Agreement Date (15/05/2024), Status (Active), Mode (After Sales), Revision No. (3), Service Level (AI_maqta tower MEP), SL Description (AI_maqta tower MEP), Agreement Type (AMC - Non comprehensive), Effective From (15/05/2024), Effective To (14/05/2025), and Max Contract Duration[M] (12.00).

The 'Unit Details' tab is selected, showing a table with columns: #, Unit, Item Code, Variant Code, Item Variant Description, and Expiry Parameter V. The table contains two rows:

#	Unit	Item Code	Variant Code	Item Variant Description	Expiry Parameter V
1	AMT-BLD-FCU-LFT	RMSCNC			
2	AMT-BLD1-A101-BED1-AC	RMSCNC			

The bottom status bar indicates the user is logged in as RS OU1-Test role, and the system is running on 30/08/2024 at 04:21:12 PM. The server response time is 0.754 / Client 0.241, with no errors and a processing time of 13 minutes.

Service Level Agreement -> Maintain Service Level Agreement | Login on 30/08/2024 at 04:21:12 PM | (Server: 0.174 /Client: 0.116) | No error(s) | 14 Minute(s) | 5:22 PM

❖ Business Scenario:

Based on active service level agreement, if response/resolution time needs to be derived automatically for customer calls/work order execution.

❖ Limitations:

Nil

❖ Other Impact:

Nil

❖ Customer Call Enhancements

❖ Summary:

Priority for the call, category – subcategory & severity of the problem, response time and resolution time for call execution can be selected by the user. Priority, response time and resolution time will be defaulted if matching information is found in SLA for the call type, problem, category and sub category. For every customer call, estimated resolution time, actual resolution time and variation in planned duration & actual duration can be viewed.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Priority rule should have been defined for SLA or SLA-Unit combination to derive the priority, response time and resolution time, based on various parameters.

❖ **Description:**

Nil

❖ **How to use it?**

- Open the Customer Call activity to create and search various customer call enhancements related to call category, subcategory, response and resolution time, planned and actuals etc.

❖ **Navigation:**

Enterprise Asset Management → Customer Call → Customer Call

❖ **Screenshot:**

The screenshot displays the 'Customer Call' form in the 'Create' mode. The form is organized into several sections:

- Document Details:** Includes fields for Document Number, Call Date (02/09/2024), Call Time (03:38:37 PM), Status, Type Of Call (Complaint), Call Originator, Originator's Phone No., Priority, Customer Code (HLL), Customer Name (HLL Ltd), Remarks, Unit (AMT-BLD1-CHILLER1-RC), Unit Sl. No. (AMT-BLD1-CHILLER1-ROOF), OEM (SIEMENS), Location (AL_maqta tower), Nearest Land Mark, Contact Phone No., Original invoice No., Original invoice Date, SLA No. (SLA\0000168\2007), SLA Description (AL_maqta tower MEP), Agreement Type (AMC - Non comprehensive), SLA Expiry Date (14/05/2025), Free Service From, Free Service To, SLA Parameter Value, and Failure Parameter Value.
- Call Description:** Includes fields for Nature Of Complaint (URGENT), Symptom (Vib), Category, Subcategory, Problem Code, Problem Desc., Preferred Visit Date, Preferred Visit Time, Tentative Completion Date (02/09/2024), Assigned To, Response Time (HRs) (2.00), and Resolution Time (HRs) (4.00).
- Attach Image:** A section for attaching images.
- Data History:** A section for viewing the history of the document.

At the bottom of the form, there are buttons for 'Maintain' and 'Delete'. The footer of the application shows the user role (RS OUI-Test role), the last login time (02/09/2024 at 02:39:48 PM), the server/client version (0.529 / 0.117), the number of errors (0), the session duration (17 Minute(s)), and the current time (3:41 PM).

Customer Call -> Customer Call | Last Login on 02/09/2024 at 02:39:48 PM | (Server: 0.131 /Client: 0.412) | No error(s) | 18 Minute(s) | 4:02 PM

❖ Business Scenario:

User who is processing the customer calls, to get information about tentative response/resolution time and priority based on SLA with customer.

❖ Limitations:

Nil

❖ Other Impact:

Nil

❖ Service Work Order Enhancements

❖ Summary:

For After Sales SLA, agreement types for AMC will be displayed with additional information based on associated service level. If labour, spares and services are included for service level, Agreement Type will be shown as AMC – Comprehensive. If labour, spares and services are not included for service level, Agreement Type will be shown as AMC – Non Comprehensive. Among service level attributes labour, spares and services, if any of the entity is not applicable, then Agreement Type will be shown as AMC – Semi Comprehensive. Based on configuration set in clearance permit system, automated generation of clearance request/permit can be enabled upon scheduling of service work order.

Whenever priority, estimated response time and estimated resolution time information is available for the SLA associated with the service work order, icon will be shown in Schedule Details to view SLA breach information. Information such as additional duration (in hours) taken to start the work order execution and complete the work order, will be displayed.

❖ Feature Category:

Core Functionality

❖ **Pre-Requisites:**

Priority rules should have been defined to view SLA breach information. Default numbering type should have been defined to generate clearance request/permit from service work order.

❖ **Description:**

Nil

❖ **How to use it?**

- Open the Maintain Service Work Order activity for enhancing the work orders with respect of service levels.

❖ **Navigation:**

Enterprise Asset Management → Service Work Order → Maintain Service Work Order

❖ **Screenshot:**

The screenshot shows the 'Maintain Service Work Order' form. At the top, the breadcrumb navigation is 'Home > Enterprise Asset Management > Service Work Order > Maintain Service Work Order'. The user role is 'RS OU1-Test role'.

Form fields include:

- WO No.: ERM/2016/00000238
- Description: Complaint
- Status: INPROGRESS
- Work Order Type: Repair
- Work Order Category: Preventive
- Work Group: (empty)

Below the form fields are tabs: Units, Task Information, Work Order Details, and Contacts. The 'Units' tab is active, showing a table of units.

#	Unit	Item Code	Serial No.	Location	SLA	Agreement Type
1	AMT-BLD1-CHILLER2-R...	RMSCNC	AMT-BLD1-CHILLER2-	AL_maqta tower	SLA\0000168\2007	AMC - Non comprehensive
2						

At the bottom, there is a 'Schedule Details' section and a status bar showing 'Service Work Order -> Maintain Service Work Order | Last Login on 02/09/2024 at 02:39:48 PM | (Server: 1.772 /Client: 0.223) | No error(s) | 15 Minute(s) | 4:22 PM'.

The screenshot displays the 'Maintain Service Work Order' interface. An 'SLA Breach Info' pop-up window is open, showing the following details:

Agreement Type	AMC - Comprehensive
PM Visits	2
Call Date - Time	31/07/2024 06:21:00 PM
Preferred Visit Date - Time	
Tentative Completion Date	01/08/2024
Sch. Start Date/Time	31/07/2024 06:24:00 PM
Sch. Compl. Date/Time	31/07/2024 11:59:00 PM
Response Time (Hrs)	2.40
Resolution Time (Hrs)	3.60
SLA Exceeded By (Response)	27.60 Hour(s)
SLA Exceeded By (Resolution)	796.40 Hour(s)

The background window shows a list of SLA breaches with columns for SLA and Agreement Type. The first entry is SLA\0000024\2007 with Agreement Type AMC - Comprehensive. There are buttons for 'Cancel SWO' and 'Print Report' at the bottom right of the main window.

❖ Business Scenario:

Whenever there is necessity to get clearance permit for execution of service work order, support for automated permit generation upon scheduling of work order. Whenever there is delay in starting the work order execution/completing work order, to notify the user about SLA breach.

❖ Limitations:

Nil

❖ Other Impact:

Nil

❖ Clearance Request & Permit Enhancements

❖ Summary:

Clearance request and clearance permit can be created with reference to service work order. Activity details can also be mapped for unit during creation of clearance permit. Based on configuration set in clearance permit system, clearance request/permit can be auto generated upon scheduling of service work order.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Service work order should be available in 'Scheduled' status. Unit should be available in 'Active' status.

❖ Description:

Nil

❖ How to use it?

- Open the Create Clearance Request activity to create the request for service work order clearance
- Open the Create Clearance Permit activity to create the permit for service work order clearance

❖ Navigation:

Enterprise Asset Management → Clearance Permit System → Create Clearance Request

Enterprise Asset Management → Clearance Permit System → Create Clearance Permit

❖ Business Scenario:

Whenever there is need of clearance permit for service work order execution/to raise clearance request for unit.

❖ **Limitations:**

Nil

❖ **Other Impact:**

Nil

❖ **Numbering Series for Clearance Request/Permit Based On Type & Category**

❖ **Summary:**

If clearance request/permit number generation need to occur based on type, category or both, active numbering series can be mapped for unique combinations of permit type/permit category/request category. During manual generation of clearance request or clearance permit, based on type - category chosen, corresponding numbering type will be utilized for transaction number generation. If there is no matching numbering type available for the type/category chosen during creation of clearance request/permit, then default numbering type mapped for clearance request/permit transactions will be used for number generation.

❖ **Feature Category:**

Core Functionality

❖ **Pre-Requisites:**

Active clearance request/permit numbering types should be available to proceed with numbering rule definition

❖ **Description:**

Nil

❖ **How to use it?**

- Open the Option Setting activity to set the numbering series mapping based on Clearance Request/Permit based on Type & Category.

❖ **Navigation:**

❖ Bulk Update & Workflow on WO-Spares/Services/Root Cause Analysis

❖ Summary:

Any update in Spare/Service/RCA information can be routed for multilevel authorization. Based on 'Mode' selected, spare/service/root cause analysis information can be updated for the work orders available in 'Scheduled'/'IN Progress' status. If search is performed by specifying work order number, spare/service information can be updated or existing information can be deleted. Root cause analysis information can be updated for multiple work orders simultaneously. Once required spare/service/RCA details are updated, based on work flow configuration, approver can proceed with bulk approval/rejection of work order spare/service/RCA information.

❖ Feature Category:

Core Functionality

❖ Pre-Requisites:

Workflow configuration should be available for area codes related to spare/service/RCA

❖ Description:

Nil

❖ How to use it?

- Open the Bulk Processing activity to execute any update in Spare/Service/RCA information that can be routed for multilevel authorization.

❖ Navigation:

Version 6.10

Release Section

XII. Enterprise Asset Management

❖ User-Defined Zone-Bin Allocation of spares

❖ Summary:

Allocation of spares from required zone/bin can be done for scheduled work orders. By selecting the 'Allocation Method' as "User Defined Zone – Bin," required zone-bin information can be keyed in by user. If default allocation method is set as "User Defined Zone – Bin" in option settings, then system will default the same during allocation of spares.

❖ Feature Category:

Usability

❖ Prerequisites:

Nil

❖ Description:

Nil

❖ Navigation:

Enterprise Asset Management > WO Planning and Scheduling > Book Parts

❖ Screenshot / Report format:

#	Item	Item Desc.	Allocation Method	Sch. Qty.	Allocated Qty.	To Be Allocated Qty.	UOM	Warehouse	Zone	Bin
1	ITEM\10000002...	pump bearing	USER DEFINED ZONE-BIN	10.00	0.00	10.00	NO	WHFMFG1	ZN1	BN1
2	ITEM\10000003...	pump seal	MAXIMUM ZONE BIN	15.00	0.00	15.00	NO	WHFMFG1		
3			MAXIMUM ZONE BIN							

❖ Business Scenario:

If user wants to allocate spares from specific zone/bin, instead of various system managed allocation methods.

❖ Limitation:

Nil

❖ Other Impact:

Nil

❖ Managing Resolutions for Work Orders

❖ Summary:

If resolution information is available for the problem code or combination of problem code and cause code, required resolutions can be selected from the list of suggested resolutions during creation of work order. Resolutions selected for the work order can be modified and resolutions used for work order execution can also be viewed.

❖ Feature Category:

Core Functionality

❖ Prerequisites:

Resolutions should have been defined for problems or for combination of problems - causes

❖ Description:

Nil

❖ Navigation:

Enterprise Asset Management > Work Order > Create/Edit/View Work Order

❖ Screenshot / Report format:

❖ Business Scenario:

Instead of manual entry, if resolutions need to be suggested by the system on the basis of problem and cause.

❖ Limitation:

Nil

❖ Other Impact:

Nil

❖ Management of Unit Warranty in Pack Slip processing

❖ Summary:

If item being shipped is a warranty enabled serial controlled item, option available to auto generate the unit parametrically based on customer and ship to ID. For auto generation of unit, rule can be set as 'Item-Variant-Serial Number Combination' or 'Serial Number.' Default cost center and work group defined in unit function parameters will be utilized for auto generation. The number of auto generated units will be equal to quantity of warranty enabled serial controlled item that is getting shipped. Based on warranty days and ship date, warranty end date of auto generated units will be displayed. In addition to this, update to warranty end date of units can be set to happen based on completion of associated installation service work order.

❖ Feature Category:

Usability.

❖ Prerequisites:

Item should be serial controlled and warranty should have been enabled in sale order.

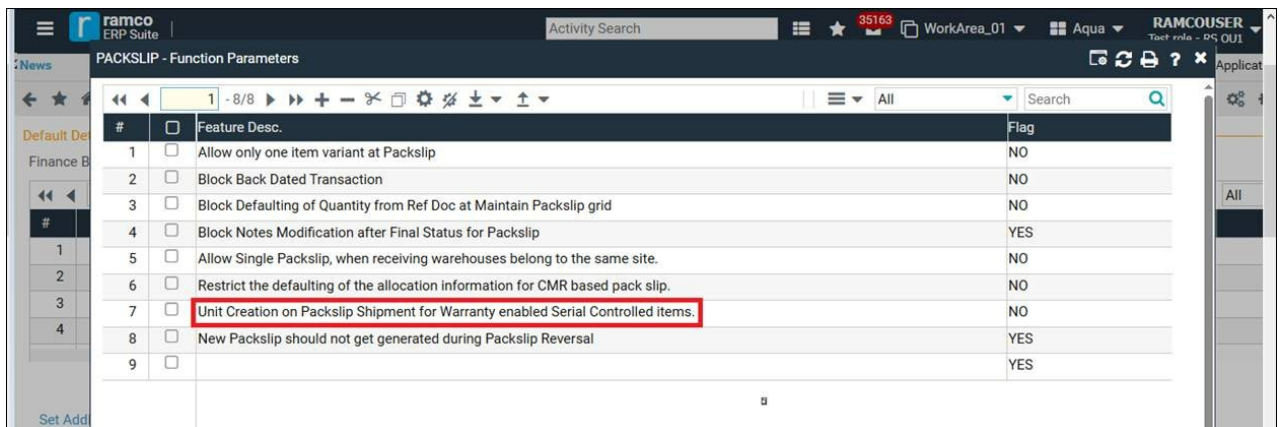

❖ Description:

Nil

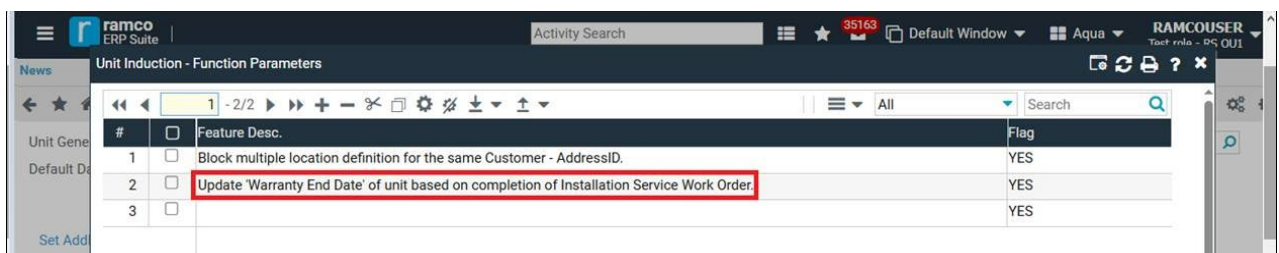

❖ Navigation:

Sales and Shipping > Pack Slip > Maintain Pack Slip

❖ Screenshot / Report format:

#	Feature Desc.	Flag
1	Allow only one item variant at Packslip	NO
2	Block Back Dated Transaction	NO
3	Block Defaulting of Quantity from Ref Doc at Maintain Packslip grid	NO
4	Block Notes Modification after Final Status for Packslip	YES
5	Allow Single Packslip, when receiving warehouses belong to the same site.	NO
6	Restrict the defaulting of the allocation information for CMR based pack slip.	NO
7	Unit Creation on Packslip Shipment for Warranty enabled Serial Controlled items.	NO
8	New Packslip should not get generated during Packslip Reversal	YES
9		YES

#	Feature Desc.	Flag
1	Block multiple location definition for the same Customer - AddressID.	YES
2	Update Warranty End Date' of unit based on completion of Installation Service Work Order.	YES
3		YES

❖ Business Scenario:

If units need to be covered under warranty automatically after shipment or after completion of installation service work order, service item and serial controlled items (unit) can be included in sale order.

❖ **Limitation:**

Nil

❖ **Other Impact:**

Nil
