

Version 6.8

Release Section

VI. Management Accounting

❖ Introduction Of Process Stock

❖ Summary:

In Cement Industry there could be a scenario in which product would be produced and shipped to customer when order received. In this whole process the item codes could be created with Item Type as 'Intermediate' or 'Finished Product', Item Costing Method 'Standard Costing' Cost of the Item '0 (zero)'.

For this 'Intermediate' or 'Finished Product' item we do not have value in the systems since the cost for these items are 0 (zero). Hence, we need to calculate the cost for these items and need to pass on JV for maintaining the stock value in our systems.

There are varies Process Unit in which the 'Intermediate' or 'Finished Product' items are used hence cost to be processed for each process unit separately.

❖ Feature Category:

Core-Functionality.

❖ Pre-Requisites:

The raw material cost would be fetched from Process Production BPC for processing cost. Hence production issue transaction should exist with required master data for the period for which the cost to be processed.

Inventory BFG to be closed for cost processing. Because if production issue transaction created after processing cost, then those cost could not be considered.

Required Finance Book to be mapped for "Management Accounting-Process Stock-User" combinations in 'Maintain User – Finance Book – Component Mapping' activity.

❖ Description:

The cost to be processed only in the Process Unit sequence because current process unit closing balance quantity and value would be taken as opening balance quantity and value for next period. Similarly, if any cost to be reversed than the reversal should be done in reverse chronological order.

❖ Business Scenario:

In Cement Industry there could be a scenario in which product would be produced and shipped to customer when order received. In this whole process the item codes could be created with Item Type as 'Intermediate' or 'Finished Product', Item Costing Method 'Standard Costing' Cost of the Item '0 (zero)'.

For this 'Intermediate' or 'Finished Product' item we do not have value in the systems since the cost for these items are 0 (zero). Hence, we need to calculate the cost for these items and need to pass on JV for maintaining the stock value in our systems.

There are varies Process Unit in which the 'Intermediate' or 'Finished Product' items are used hence cost to be processed for each process unit separately.

❖ Limitations:

- If a common Stock account is defined for all the Output Item, then valuation of stock for the closing date would not be as per expected functionality. If this Stock Account is used for any other transactions, then the stock account value is ambiguous.
- Hence, we should define only one output item for each Process Unit.
- Stock Account should be defined Output Item wise and separate Sock Account code should be defined for each of the output items in Item Account Definition page (for each process unit).

❖ Other Impact:

Nil.

❖ Facilitates Multi-Level Authorization in Cost Budget**❖ Summary:**

This feature facilitates to authorize cost budget at multiple levels through parameter. The cost budget become Active only after final level authorization. Provision to authorize the budget through mail with required configuration.

❖ Feature Category:

Core-Functionality.

❖ Pre-Requisites:

Company Level Parameter to be set to YES for "Creation and authorization of Cost Budget".

Company Level Parameter to be set to YES for "Amendment of Cost Budget".

❖ **Description:**

Creation or Amendment of Cost Budget can be made active only after the cost budget got authorized by the respective authorizers.

Release Section

VII. Management Accounting

❖ Defaulting Behaviour and Traceability During Cost Element Creation

❖ Summary:

Provision to specify the behaviour and traceability for the cost element

❖ Feature Category:

Usability.

❖ Prerequisites:

Nil.

❖ Description:

Addition of two new columns labeled “Behaviour” and “Traceability” in Cost Element Creation Pages to track the behavior and traceability of the Cost Elements at the time of creation itself.

❖ How to Use?

- Launch the Create Cost Element activity from the Cost Setup Component, give Cost Element Creation inputs, Select Behaviour and Traceability Column values, and Execute Create Cost Element.
- Same changes incorporated in Edit Cost Element activity / Generate Normal Cost Element and View Cost Element
- During Cost Center Mapping if behaviour and traceability available in Cost element, same will be defaulted.

❖ Navigation:

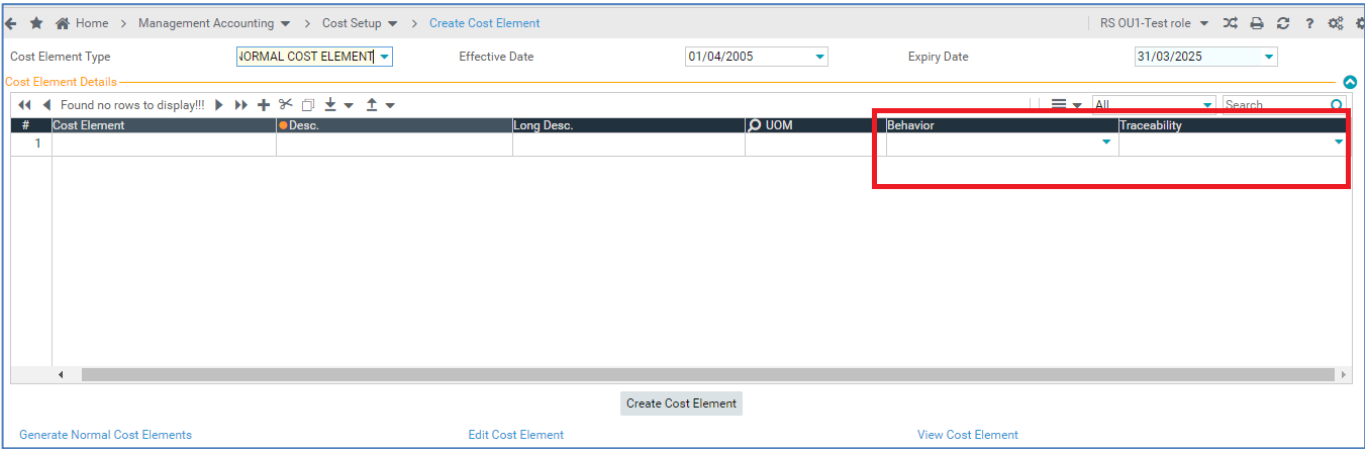

Management Accounting → Cost Setup → Create Cost Element

Management Accounting → Cost Setup → Edit Cost Element

Management Accounting → Cost Setup → Generate Normal Cost Elements

Management Accounting → Cost Setup → View Cost Element

❖ Screenshot:

❖ Business Scenario:

Addition of new columns in the multiline of Cost Element Creation Pages.

❖ Limitation:

Nil.

❖ Other Impact:

Nil.

VI. Management Accounting

❖ Cost Budget Version Amendment

❖ Summary:

Facility to increment the Budget Version from Amend Cost Budget

❖ Feature Category:

Core Functionality.

❖ Prerequisites:

Nil

❖ Description:

Previously, it was possible to create multiple versions of the cost budget from the create page. This feature facilitates to increment the budget Version from Amend Cost Budget.

❖ How to Use?

- Now, validation has been added to restrict the increment of the Budget Version from the Create Budget Header, Create Budget Details, and Distribute Budget pages.
- Users can now amend budgets through the Amend Cost Budget page.
- The latest version of the Budget which is either in “Active” or “Under Amendment” status can be amended.
- When a user retrieves the latest version of a budget that is in 'Active' status and clicks 'Save' for the first time, the system will automatically increment the version number by 1 and update the budget status to 'Under Amendment'

❖ Navigation:

Cost Budget --> Create Cost Budget --> Create Cost Budget Header

Cost Budget --> Create Cost Budget --> Create Cost Budget Details

Cost Budget --> Create Cost Budget --> Distribution Budget

Cost Budget --> Amend Cost Budget --> Amend Cost Budget Header

Cost Budget --> Amend Cost Budget --> Amend Cost Budget Detail

❖ Screenshot / Report format:

The screenshot shows the 'Amend Budget Header' form in the Ramco ERP system. The form is divided into several sections: 'Budget Details', 'Range Selection Cost Center / Unit', 'Cost Element', 'Accounting Period', 'Increase / Decrease Details', and 'Edit Options'. A 'Virtual Works™ Message' dialog box is displayed in the center, indicating that the changes have been 'Saved Successfully'. The dialog box has 'Ok' and 'Cancel' buttons. The background form shows fields for Budget No. (VB210425), Version No. (4), Status (Under amendment), Effective Date (01/04/2025), and Expiry Date (30/04/2025). There are also buttons for 'Save', 'Amend and Authorize', and 'Make As Default' at the bottom.

❖ Business Scenario:

Users can incrementally version the Cost Budget during Amendments, ensuring accurate tracking of budget changes.

❖ Limitation:

Nil

❖ Other Impact:

Nil

❖ Cost Budget - Checklist Addition

❖ Summary:

Facility extended to add Checklist in Cost Budget.

❖ Feature Category:

Usability

❖ Prerequisites:

Nil

❖ Description:

Checklist functionality is enabled for the Cost Budget, controlled via Checklist master & validations.

❖ How to Use?

- Checklist link is added in Create, Edit, Authorize, Amend & View Pages for user to visit & add checklist details, if mapped to the transaction types

Checklist master changes:

- Map Checklist is used to default the Checklist ID for the selected transaction.
- Map the Tran types for defaulting the Checklist ID in the transaction.
 - Cost Budget (MAC_CBUD)
- Map the Tran types for defaulting the Checklist ID in the transaction.

- Map Checklist - Entity level is used for defaulting the Checklist ID for the selected Transaction and also to validate if the checklist is pending during Authorization.
- Transaction Entity will be loaded with "Entity not Applicable".
- If validate during "Authorize" is selected, on Cost Budget Authorization the system will validate if the mapped Checklist is confirmed and in "completed" status. Else, Authorization doesn't validate Checklist availability or confirmation.
- On Amend user can provide new checklist for the version save and confirm the same. Checklist will be saved for the version number.

❖ Navigation:

Specify Checklist has been added in the following pages:
