XI. Process Production

❖ **RMC Diary**❖ **Description:**

This feature provides the calendar view of RMC Production Schedules.

This page gives Birds eye view & Worms eye view -Daily, Weekly, Monthly and Yearly in different colors [Green / Blue / Yellow / Gray ...] based on Order status.

It also has a rich filter criteria fields like Process Unit, Transit Mixer, Pump and Drivers.

❖ Feature Category:

Core Functionality.

❖ Pre-Requisites:

Nil.

RS OU1-Test role

Transaction Number: PIR/0115/2023

Transaction Date: 08/07/2025

Status: Authorised

Recipe Code: YAZH

Description: YAZH

Batch No: 1

Sale Order Number:

Remarks:

Batch Size: 1.00

Customer Code:

Customer Name:

Batch Size: 1.00

Unit Class: UCL1

Loss/Gain Quantity: 0.50

Consumption Details

#	Stock Status	Lot No.	Sub Lot No.	Available Qty.	Actual Source	Actual Brand
1	ACCEPTED	LNT23		10.00	AS01	AB01
2	ACCEPTED					

Production Details

#	Bin	Lot No.	Sub Lot No.	Available Qty.	Remarks
1	bn1	L1234		10,080.50	
2					

❖ Business Scenario:

For each input line item, the system displays the Stock Status and Available Quantity, allowing users to quickly assess the stock position without navigating to separate inventory views.

For Lot-controlled items, new fields for Lot Number and Sublot Number have been added, enabling users to capture and reference specific lot and subplot details directly within the transaction screen

❖ Limitation:

Nil

❖ Other Impact:

Nil

❖ Unit Class in RMC Report Production

❖ Description:

The system should load the Unit Class or Parent of the Process Unit (PU) based on the selection of the Process Unit or Recipe Code in the header. Additionally, the Loss/Gain quantity must be indicated to reflect the actual value corresponding to the quantity specified in the respective field. The Planned Brand/Source (display-only) shall present the brand and source defined during the creation of the PU formula in the master data, whereas the Actual Brand/Source (editable) shall allow for the specification of the brand and source that were utilized during the unit's processing.

❖ Feature Category:

Major Enhancement

❖ Prerequisites:

Nil

❖ Navigation:

Process Production --> Process Industry Reporting --> Report RMC Production and Consumption

❖ Screenshot / Report format:

❖ Business Scenario:

Unit Class:

The system should automatically fetch and load the associated Unit Class / Parent Unit from the master data of the selected PU.

Loss / Gain Quantity:

A field for Loss/Gain Quantity should be provided. The user will enter a value in this field representing any actual variance (gain or loss) observed during processing. This field should support both positive (gain) and negative (loss) values.

Planned Source & Brand:

System will display the planned source and brand from Formula master against the given item.

❖ Limitation:

Nil

❖ Other Impact:

Nil

❖ Enable Sequence management for Input Items in Warehouse Mapping Page

❖ Description:

Seq. No. column addition to arrange / reorder the input items in the Item Warehouse mapping page.

❖ Feature Category:

Major Enhancement

❖ Prerequisites:

Nil

Seq. No. column addition to arrange / reorder the Parameter Codes in Create, Edit and View Parameter Group and Maintain Item - Parameter mapping page.

❖ Feature Category:

Major Enhancement

❖ Prerequisites:

Nil

❖ Navigation:

Process Production --> Process Industry Setup --> Maintain Item – Parameter mapping

Process Production --> Parameter Model --> Create Parameter Group

Process Production --> Parameter Model --> Edit Parameter Group

Process Production --> Parameter Model --> View Parameter Group

❖ Screenshot / Report format:

View Parameter Group Screenshot:
