

Version 6.7

Release Section

❖ Limitation:

If Action is done by the User using the Unify app, Success messages are not coming now. This shall be handled in the subsequent versions of Unify App.

❖ Other Impact:

Nil.

III. Receivable Management

❖ Additional Columns in Customer Miscellaneous Invoice**❖ Summary:**

Addition of new columns in Customer Miscellaneous Invoice screens.

❖ Feature Category:

Usability.

❖ Pre-Requisites:

Nil.

❖ Description:

This Feature facilitates the addition of two new columns like “Ref Doc No.” and “Ref Doc Date” in the multiline of Customer Miscellaneous Invoice screens to record the Reference Document No and date.

❖ How to Use?

- Launch Create Miscellaneous Invoice from Customer Direct Invoice business component.
- Create a Miscellaneous Invoice with Reference document no and date
- Select the above invoice no from Edit Miscellaneous Invoice page from Customer Direct Invoice business component and check “ref doc no” and “ref doc date” columns in the multiline and Edit
- Select the above invoice no from Authorize Miscellaneous Invoice page from Customer Direct Invoice business component and check “ref doc no and ref doc date” columns in the multiline and authorize it.
- Select the above invoice no from View Miscellaneous Invoice page from Customer Direct Invoice business component and check “ref doc no and ref doc date” columns in the multiline.

❖ Navigation

Receivable Management → Customer Direct Invoice --> Create Miscellaneous Invoice

Receivable Management → Customer Direct Invoice --> Edit Miscellaneous Invoice

Receivable Management → Customer Direct Invoice --> Authorize Miscellaneous Invoice

Receivable Management → Customer Direct Invoice --> View Miscellaneous Invoice

❖ Screenshot:

❖ Business Scenario:

Addition of two new columns in Customer Miscellaneous Invoice screens to record Reference document number and date. (for example Customer PO No. and Date)

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

❖ Defaulting Address ID from Customer Order Based Invoice Reference Document in Item Based Debit Credit Note

❖ Summary:

Provision to default the Customer Address ID from Customer Order Based Invoice as Reference document in the Item Based Note.

❖ Feature Category:

Usability.

❖ Pre-Requisites:

Enable the Functional Parameter “Default Unique Address ID from Reference Document in Item Based Note”.

❖ Description:

Based on the Functional Parameter set as Yes - “Default Unique Address ID from Reference Document in Item Based Note”, customer address id gets defaulted on Creation of Item based notes if we specifically searched with Customer Order Based invoice/s having single/same customer address id . The same should be defaulted in Item based notes tax calculation summary page.

❖ How to use it?

- Set the functional parameter “Default Unique Address ID from Reference Document in Item Based Not” as Yes.
- Launch the “Create Item Based Note” activity from the Customer Debit Credit Note business component.
- Give the Customer Order based invoice/s no under the search criteria and execute Search Task
- Check the Customer address id of Order Based Invoice defaulted in the Customer Address Id combo and click Create Note / Create and Authorize Note

❖ Navigation:

Receivables Management --> Customer Debit Credit Note--> Create Item Based Note

Receivables Management --> Customer Debit Credit Note--> Edit Debit Credit Note

❖ Screenshot:

❖ Business Scenario:

Facilitates to default the Customer address id from Customer Order Based Invoice/s in the Item Based Note.

❖ Limitations:

If Multiple Order Document/ Reference document with different address IDs, order based Invoice is created, Item Based Note address Id defaulting as per current functionality

❖ Other Impact:

Nil.

❖ Rounding Off Option in Customer Debit Credit Note Components

❖ Summary:

Enable values in Customer Debit Credit Note components to be rounded off.

❖ Feature Category:

Usability.

❖ Pre-Requisites:

Functional Parameter configuration.

❖ **Description:**

Depending on the "Rounding Off Parameters" settings on Set function parameter, there is a provision for rounded off values of customer item-based and account-based notes. The new "Round Off Amount" control added in all Customer debit credit note screens to display the actual rounded up amount.

❖ **How to Use?**

- Select Set Function Parameters -> Rounding Off Parameters from Customer Debit Credit Note business component.
- Select Note Type as Item Based / Account Based, Select the Rounding Off at Nearest / Ceiling and Give round off values e.g. - 0.5 and Set
- The Total Amount to be updated in Total invoice amount in the all the transaction tasks of the component.

❖ **Navigation:**

Receivable Management → Customer Debit Credit Note → Set Function Parameters

Receivable Management → Customer Debit Credit Note → View Function Parameters

❖ Business Scenario:

Facilitates invoice freight amount added in Consignment Sale Order.

❖ Limitation:

Nil.

❖ Other Impact:

Nil.

❖ Auto Adjustment of Customer Account Based Debit Credit Notes

❖ Summary:

Provision to auto adjust of Customer Account Based Debit Credit Notes.

❖ **Feature Category:**

Usability.

❖ **Pre-Requisites:**

Functional Parameter Configuration and Auto Adjust Combo settings.

❖ **Description:**

Provision to auto adjust the given eligible reference document with Account Based Debit Credit Notes based on the Functional Parameter settings “Defaulting Adjustment Information with the Outstanding Reference document” set as Yes and Auto Adjust combo set as “Yes” and hence it is proposed to call the auto-adjustment service to acquire all the outstanding documents for the Customer, Finance Book, Currency combination. The auto adjust combo would be introduced for Account based note screens.

❖ **How to Use?**

–Component Set Function Parameter	Customer Account Based Screens	Account Based Note Type	
Set - Defaulting Adjustment Information with the Outstanding Reference Document	Set - Auto Adjust Combo	Credit	Debit
YES	YES	If reference document is given, Given Ref Doc adjusted with the Note first Else , on FIFO basis	
YES	NO	If reference document is given, given Ref doc adjusted with the Note first Else , on FIFO basis	
NO	YES	Irrespective of Reference document, Adjustment is based on the FIFO Basis	
NO	NO	No Adjustments happen	

❖ **Navigation:**

Receivable Management → Customer Debit Credit Note → Create Account Based Note

Receivable Management → Customer Debit Credit Note → Edit Debit Credit Note

Receivable Management → Customer Debit Credit Note → Authorize Debit Credit Note

Receivable Management → Customer Debit Credit Note → View Debit Credit Note

❖ **Screenshot:**

The screenshot displays the 'Create Account Based Note' form in the Ramco ERP system. The form is organized into several sections:

- Note Information:** Includes fields for Note No., Note Date (12/09/2023), Note Type (Credit), Finance Book (PFB1-GST), Status, Numbering Type (GSTDCDN), and Own Tax Region.
- Customer Information:** Includes Customer Code, Customer Name, Customer Note No., Customer Note Amount, Customer Account Code, Account Description, Customer Registered At (RSC0110U1), Customer Note Date (12/09/2023), and Customer Address ID.
- Payment Information:** Includes Currency (INR), Exchange Rate (1.00000000), Pay Term, Receipt Method, Anchor Date, Total Amount, Comments, Reason Code (Hold), Reason Description (Hold), Draft, Auto Adjust, Round Off Amount, and Project / Sub-Project Description.
- Project Information:** Includes Project OU and Project / Sub-Project Code.
- Document Information:** Includes a table with columns for #, Line No., Usage ID, Account Code, Dr. / Cr., Transaction Amount, Remarks, and Ref. Doc. Type. The table currently shows one row with a debit transaction.

❖ **Business Scenario:**

Auto adjustment of Reference documents with Customer Account Based Debit credit Notes.

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Managing Sundry Receipt Vouchers through AR Hub**❖ **Summary:**

AR Hub is now enhanced to handle Sundry Receipt Vouchers along with Customer Invoices & Notes.

❖ Feature Category

Core Functionality.

❖ Pre-Requisites:

Nil.

❖ Description:

Users can now View & Act on Sundry Receipt vouchers also from Accounts Receivable Hub. New option for selecting the Party Type has been added in the Collection Tab. AR Hub page will be driven by the selected Party Type.

❖ How to Use:

AR Hub – Collection Tab

- New PPS Parameter - PPS_COM_00001 'HIDE Receipt INFORMATION GROUP SECTION ON SCREEN LAUNCH IN AR HUB; has been introduced to hide the Receipt information section on launch of Collection tab in AR HUB. This is to show the Hub page simpler & show detailed section progressively. On click of the Receipt# the Receipt information group section shall be visible.
- A new option "Party Type" is now added in the Easy Launch. Party Type shall be loaded with "Customer" and "Sundry". Select the Party Type as "Sundry" for proceeding with Sundry Receipt Transactions.
- Tree and Search filters will be reloaded based on the Party Type selected.
- Search will fetch the records in the multiline based on the User Preference set.
- The tree will load with all the Actionable Receipt Vouchers.
- When Workflow is enabled, Tree shall fetch the Voucher based on Workflow applicability and Search filter will list all Vouchers.
- Bulk / Individual Action (Delete, Authorize, Return, , Reverse, Print) can be done on the Voucher
- Value Summary can be seen in a snapshot.
- Links are provided for relevant View and Action pages.

The screenshot displays the Accounts Receivable Hub in the Ramco ERP Suite. The 'Sundry' dropdown menu is highlighted with a red box. The interface includes a navigation pane on the left with 'TO DO' items, a main area with search filters, and a table of receipts.

Receipt Category	Receipt #	Curr.	Receipt Amount	Receipt Date	Receipt Mode	Bank / Cash Code	Status	Attachment	Finance Book	Discuss	Remarks
☒ Regular	SUR/10000866/2020	₹	49.98	17/06/2023	Direct Debit	0064F7	Fresh		R1PFB1		Rece
☐ Regular	SUR/10000834/2020	\$	1000.00	16/06/2023	Cash	CASH_DLUSD	Fresh		R1PFB1

❖ API to generate Customer Order Based Invoice

❖ Summary:

This new POST API enables Creation, Authorization and Return of a Customer Order based Invoice.

❖ Feature Category:

APIs : Product integration

❖ Pre-Requisites:

Corresponding API infra & Runtime version. API Request Call to be triggered from a 3rd Party application to Ramco when required. These APIs will be hosted through Ramco's API gateway and exposed to the 3rd party system to request for Creating / Cancelling the documents. All the mandatory fields should be supplied by the 3rd Party system. The action of the API call will provide a response from Ramco on whether the request is accepted or rejected, and the Ramco document Details will be provided for reference.

❖ Description:

This new API supports Create, Create & Auth, Return and Direct Authorize. `\CustomerOrderInvoice`

- Different Order based Invoice types can be generated through the API.
- Allows Bulk Invoice generation
- Specify "CR" if you want to Create Invoice in Fresh, "AU" if you want to create the Invoice in Authorized status, "RET" If you want to return the Invoice. Provide "DA" if you want to Directly Authorize the already generated Invoice where data are not expected to be modified and invoice details are not required as input. Just with Action flag, Tran no. , invoice Authorization can be done.
- Additional validations are handled in the API for dropdown values and other controls.

❖ How to Use?

Integration Data Element:

- The 3rd party system should default the below mandatory config data requesting Ramco API. Sample:
 - User ="ctxt user"
 - Organization Unit="20"
 - Role ="user role"
 - Language Id ="1"

- isTesting =“false”
- Ramco’s standard application services are used to create transactions with all validations and logic in place. Standard HTTP Response Code: 200 – Transaction Successful /400 – Bad Request / 500 – Internal server error

Authentication:

- The API will be secured using basic authentication and the details of the username and password needs to be obtained from the integration team by raising a request by the project team.

❖ Business Scenario:

For integration from 3rd party applications - consuming via BOTS/ EMAILs/ Mobile Apps

❖ Limitations:

Nil.

❖ Other Impact:

Nil.

*** Note: The above feature involves commercials and is not available for all customers. Please contact your Ramco Account Manager.**

❖ Printing OU Address instead of Company Address**❖ Summary:**

OU Address will be printed in the header instead of Company Address based on the PPS Parameter on Print Voucher (both Online and Offline Report) for specific PM & RM Transactions

❖ Feature Category:

Usability

❖ Pre-Requisites:

Nil

❖ Description:

- Based on PPS Parameter “Printing OU Address in Document Printing” [PPS_GEN_0001] address will be printed.

- Address ID mapped in Maintain OU properties will be printed for the Transaction OU instead of Company Address in the Online / Offline Print of below components when the above parameter is set as “YES”.
 - SUNDRY RECEIPT
 - CUSTOMER RECEIPT
 - CUSTOMER PREPAYMENT INVOICE
 - SUPPLIER PREPAYMENT INVOICE
- If the above parameter is set as “NO”, then Company Address would be printed.

❖ How to Use?

Changes applicable in the following List of Tasks (Online Report).

Version 6.9

Release Section

III. Receivable Management

❖ Auto-adjustment of Customer Receipt via Mail & Based on Collection Info

❖ Summary:

Facilitates auto-adjustment of reference documents with auto-generated customer receipts via scheduler job.

❖ Feature Category:

Usability.

❖ Prerequisites:

- Customer Virtual Account Settings.
- Functional Parameter Settings.
- Scheduler Job run.

❖ Description:

- Businesses with a broad customer base kept virtual bank account information with the bank for each client so they could easily identify the collections against each customer.
- By consuming the API published by Ramco, Banks can push the information in a specific format to Ramco via integration and the same is pushed to a staging table and from where the customer Receipt is getting auto-generated based on the available information (as part of the previous releases)
- Now Provision has been made to auto adjust with the Open debit documents based on Mail. A Job will run to trigger Mail to the customer with the List of Open Documents pending for Adjustments. Based on the reply from the customer, documents will be adjusted.
- Without Mail Option is also available, when the Reference document is populated in the staging table, automatically the reference document and the auto-created customer Receipt will get adjusted.
- For this, scheduler jobs are set up to automatically generate customer receipts using bank integration data, mailer jobs are introduced to send mail to a designated customer email address as soon as the receipt is auto-generated, and auto adjustment schedulers allow for the adjustment of customer receipts using open debit documents belonging to the relevant customer.

❖ How to Use?

- Select the Set Function Parameters activity from the Customer Receipt Business component and set the "Status Of Auto Generated Receipt From Bank Integration" parameter as Draft / Fresh /Authorized / Auto Adjusted-FIFO
- Select Maintain Party Virtual Account Information Activity from Bank Cash Definition Business component and provide virtual account details of the Customers and select Auto Adjust Option.
- Auto Adjust Option loaded with No, Without Mail & Mail Based options.

Set Auto Adjust Option as No

- Configure Customer Receipt auto gen scheduler Job and Customer Receipt autogenerated based on the integration data received from the bank.
- Customer Receipt auto-generated with Draft / Fresh status should be authorized for further adjustment.
- The Customer Receipt can be manually adjusted with open debit reference documents at Create Single Currency Adjustment Activity from the Customer Balance Adjustment business component.

Set Auto Adjust Option as Without mail

- Configure Customer Receipt auto gen scheduler Job and Customer Receipt autogenerated based on the integration data received from the bank and the bank will provide reference document details too.
- Customer balance adjustment can be auto-adjusted as soon as the Customer Receipt gets auto-generated with debit document details provided by the bank.

Note: For this Customer Receipt function parameter "Status Of Auto Generated Receipt From Bank Integration" parameter to be set as "Authorized"

Set Auto Adjust Option as Mail Based

- If the Auto Adjust option is Mail Based, the User can select either Bill to / Ship to address mail id from "Email to" combo control and can give additional mail ID information in the Other email ID column.
- Configure Customer Receipt auto gen scheduler Job and Customer Receipt autogenerated based on the integration data received from the bank.
- Configure Customer Mailer scheduler Job and mail will be sent to the designated mail ID with Customer Outstanding debit documents.
- Customer Balance Adjustment will be auto-generated as soon as the Customer responds to the mail.

Note: The customer can copy paste the whole content in his reply or, just reply inline in the table with the amounts alone. If the Format is modified or tampered with, auto-adjustment will not happen.

❖ Bulk Item Based Customer Debit Credit Note

❖ Summary:

Bulk Item Based Customer Debit Credit Note

❖ Feature Category:

Usability.

❖ Pre-Requisites:

Nil.

❖ Description:

This feature facilitates the generation of more than one Item based Debit/Credit Note at a time. Multiple notes belonging to different Customers can be combined and generated. With the introduction of Note Category, Now Both Account Based Note and Item based note can be generated in bulk.

Further, previously, only one line of dr/cr can be given in the account-based Note. Now the Note group concept has been introduced to group multiple lines in single note and also multiple notes.

Based on the combination of note group is given or the combination of Customer Code, customer account code, payterm, address ID, Note Date, Project Code separate notes generated

How to Use?

- Launch the activity “Maintain Bulk Customer Debit Credit Note” from the Bulk Customer Debit Credit Note’ component
- Provide Batch, Note, Payment and Search Criteria information in the header
- Provide the Note Details in the Multiline
- Save the Details for Batch Generation
- Execute Save and Authorize Task for Note Generation
- For any Mistakes, the Batch (in Fresh Status) can be deleted using Delete Button
- Reverse Button can be used to Reverse the Notes of a Batch, provided no Adjustment has been made for any of the Note. Upon ‘Reversal’ of Authorized Batches, all the notes of the Batch in Fresh status will be automatically deleted and Authorized notes will be Reversed.

❖ Customer Ledger Report based on Salesperson User Mapping

❖ Summary:

When a sales person wants to view the Statement of the customers to whom he is assigned, now Provision has been enabled to retrieve Customer Ledger reports based on login User mapping with the sales person

❖ Feature Category:

Reporting.

❖ Prerequisites:

PPS parameter settings

❖ Description:

This feature facilitates to retrieve customer data based on salespersons connected to the associated login user. This feature will only function if the relevant login organization has HRMS integration. For this PPS parameter 'View customer data based on the Salesperson assigned to each customer' was introduced.

❖ How to Use?

- Set PPS Parameter 'View customer data based on the Salesperson assigned to each customer 'as Yes.
- Launch AR Inquiry activity from Customer Inquiry Business Component. Map Employee –Sales Person – Customer.
- Give the required inputs in search criteria section and execute Search Task, Customer data will retrieve based on the given search criteria inputs.
- Launch AR Inquiry activity from AR Inquiry_Mobile Business Component. Map Employee –Sales Person – Customer.
- Launch Customer Statement activity from Reports -Receivables Management business component.
- Provide the required inputs in search criteria section and execute View Customer Statement Task, Customer Statement generated based on the given search criteria inputs.
- Launch Customer Balance Ageing Analysis activity from Reports -Receivables Management business component.
- Provide the required inputs in search criteria section and execute View Customer Balance Ageing button, Customer Ageing report generated based on the given search criteria inputs.
- Launch Customer Sub Ledger Balance activity from Reports -Receivables Management business component.
- Provide the required inputs in search criteria section and execute View Customer Sub Ledger Balance button, Customer Ledger generated based on the given search criteria inputs.

❖ **Performance Tuning in Bulk Customer Direct Invoice**

❖ **Summary:**

Performance tuning in bulk customer direct invoice.

❖ **Feature Category:**

Usability

❖ **Prerequisites:**

Nil

❖ **Description:**

When more than 1000 transactions are created using bulk customer direct invoice it will be processed fully in one go or in case of unprocessed transactions present in the multiline due to incorrect value, except those all other transactions will be processed. But currently when one fails, all the transactions are rolled back and user has to correct the transaction and reprocess all the transactions again.

❖ **How to Use?**

- Create a bulk customer direct invoice with 1000 or more lines
- Some lines in the multiline will be correct and some lines may have blank or incorrect values in multiline. The lines for which are appropriate, an invoice number will be generated.

- For the transaction, which does not have appropriate values, invoice number will not be generated. The reason for unprocessed records will be mentioned in the error description column in multiline
- When a batch is having a single unprocessed document, batch status will be “Partially Processed”.
- When all the documents in the batch are processed, batch status will be “Fresh” on save task.
- Fetch only unprocessed records checkbox is available. When it is checked, only unprocessed records will be fetched in multiline.
- Those unprocessed records can be processed again when the user gives appropriate values and authorizes the batch again.
