❖ Multilevel Authorization of Hold / Release Customer

❖ Summary:

Workflow enabled for Hold / Release Customer transaction along with Mail Based Approval and ANA.

❖ Feature Category:

Workflow Configuration.

❖ Pre-Requisites:

Workflow to be enabled for the transaction.

❖ Description:

Once the transaction is created and is in Hold status, the document will be routed to the corresponding user as per workflow configuration for approval.

On release, the document status will be updated as RELEASED and the document will be routed to the corresponding user as per workflow configuration for approval.

Mobile & Mail based approval for Hold / Release Customer.

❖ Navigation:

Sales and Shipping → Customer → Hold / release Customer

❖ How to Use:

Approval or Rejection of Hold / Release via Desktop:

- On Create of transaction, document, and workflow status will be updated as Hold.
- Levels of authorization can be set in the workflow configuration.
- As per the workflow configuration, the document will be routed to the corresponding users.
- If Rejection is done at any level – The document will be in Returned status.
- On Hold / Release of Returned Document by the User who created the document, again notification will come to the Users based on the approval levels.

Hold / Release Customer via Mailer:

- On Create of the transaction, a Notification will come to the Inbox.

- For the said transaction the levels of authorization can be set.
- Hold or Release from Mail can be done by replying to the mail- For Release, reply YES/OK/ACCEPT/APPROVED | For Reject reply NO/CANCEL/REJECT
- On 1st level authorization, the said transaction is Release, and workflow status will be updated.
- If Rejection is done at any level – The document will be in Returned status.
- On Hold / Released of Returned Document by the User who created the document, again notification will come to the Users based on the approval levels.

Workflow Push Notification in Hold / Release through UNIFY Mobile App:

- On Hold of the transaction, Push Notification will come as a notification on the mobile screen & inside the Unify App with an action button to Hold & Released.
- For the said transaction the levels of release can be set.
- On 1st level of release, the said transaction is Released from the Mobile and workflow status will be updated.
- If Rejection is done at any level – The document will be in Returned status.
- On Hold / Release of the same document by the User who created the document, the push notification will come to the User based on the approval levels.

❖ **Business Scenario:**

Nil.

❖ **Limitations:**

❖ Feature Category:

Nil.

❖ Pre-Requisites:

Nil.

Version 6.8

Release Section

X. Sales and Shipping

❖ Enhancement of Sales Hub to facilitate Sales RFQ, Sales Contract, BSO Release note, Stock Transfer Order & Sales return

❖ Description:

This update enriches the Sales Hub by incorporating additional transaction types, providing users with a comprehensive view of sales-related activities. By consolidating various transactions and offering quick access to document details, this enhancement contributes to streamlined sales management and improved overall efficiency.

❖ Feature Category:

Nil.

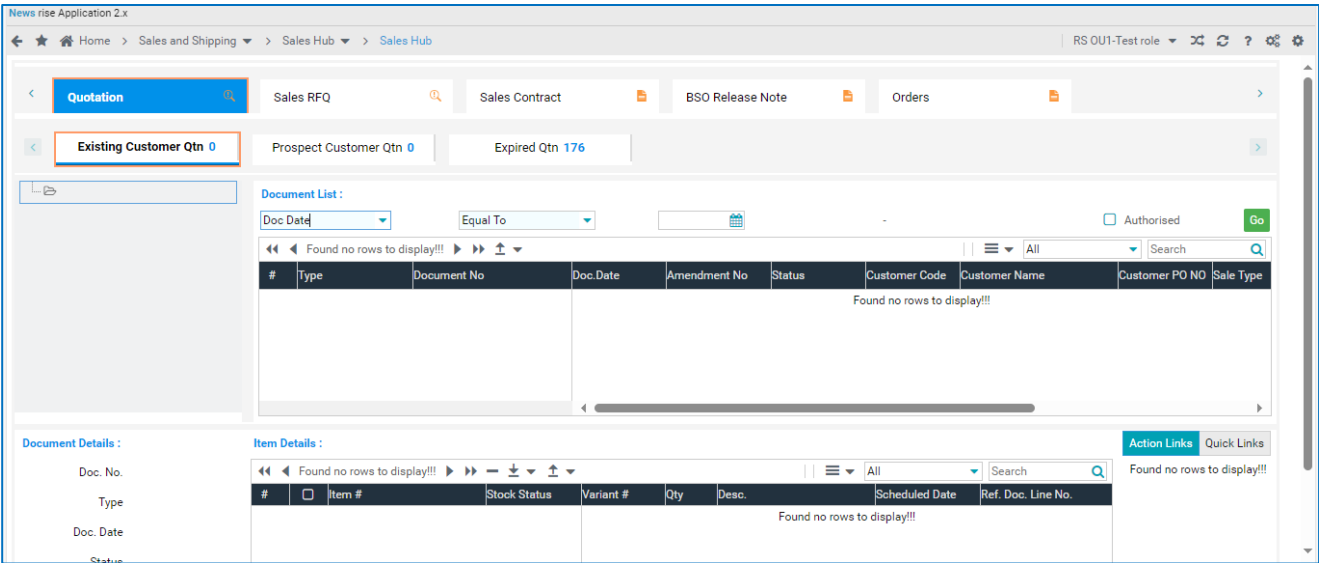

❖ Pre-Requisites:

Nil.

❖ Navigation:

Sales and Shipping → Sales Hub → Sales Hub

❖ Screenshot:

❖ **Business Scenario:**

The business scenario of enhancing the Sales Hub to include additional transactions addresses the practical need for a more holistic and efficient sales management system. By providing a centralized hub for diverse sales transactions, businesses can streamline their workflow, improve decision-making, and ensure that sales activities are effectively monitored and managed.

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **User Access rights required for Shipping Hub**

❖ **Description:**

This update introduces enhanced user access rights for the Shipping Hub, providing organizations with the flexibility to define and manage user permissions based on specific roles and responsibilities within the shipping and logistics domain.

❖ **Feature Category:**

Nil.

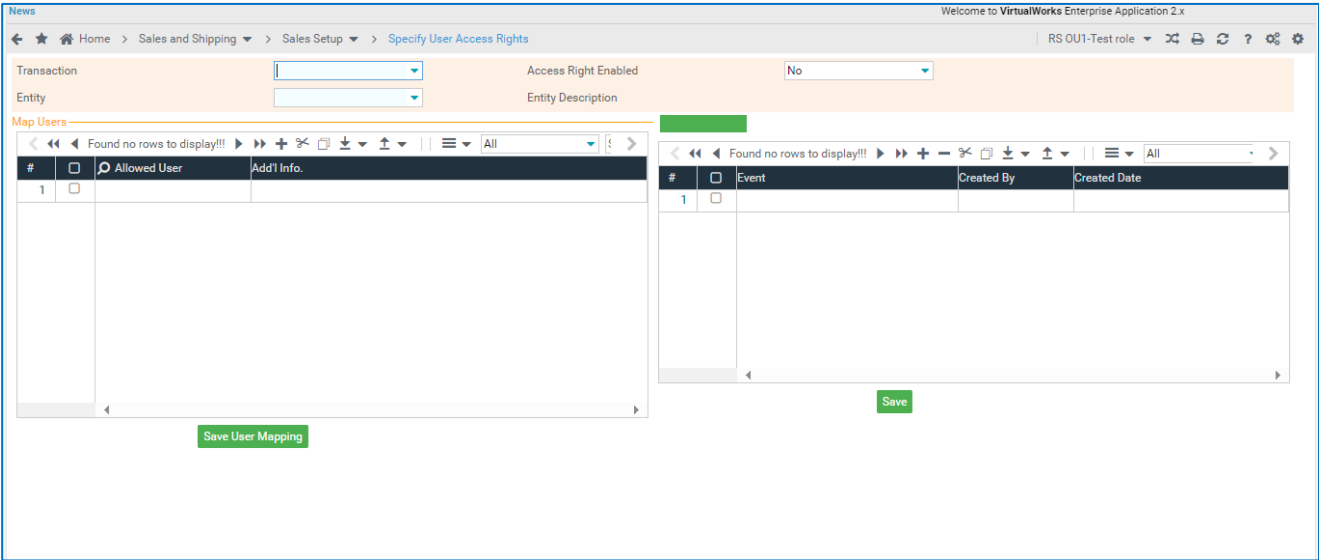

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Sales and Shipping → Sales Setup → Specify User Access Rights

❖ **Screenshot:**

❖ **Business Scenario:**

The proposed feature of user access rights for the Shipping Hub enhances security, efficiency, and accountability in shipping operations. By allowing organizations to customize user permissions based on roles, the feature ensures that users have access to the right tools and information, contributing to a streamlined and secure shipping workflow.

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Provision to increase the character limit of Customer PO field in Sale Order**

❖ **Description:**

This feature proposal suggests increasing the character limit for the Customer Purchase Order (PO) field within Sale Orders. The aim is to accommodate longer P.O. information provided by customers, allowing for better documentation in the sales process.

❖ **Feature Category:**

Core Functionality.

❖ **Pre-Requisites:**

Nil.

❖ **Navigation:**

Sales and Shipping → Normal Sale Order → Maintain Sale Order

❖ **Screenshot:**

❖ **Business Scenario:**

Increasing the character limit for the Customer Purchase Order field in Sale Orders is a practical enhancement that aligns the system with the evolving needs of users. This feature allows for more comprehensive documentation of customer purchase order details, contributing to improved communication, order accuracy, and overall customer satisfaction.

❖ **Limitations:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Quotation Acceptance screen to capture Document / Line level Accepted or Rejected details**

❖ **Description:**

This proposed feature introduces a new screen called "Quotation Acceptance" to the product, allowing users to capture line-level won/loss information for each quotation. When a sale order (SO) references this document, only the won entries will be populated in the SO multiline, streamlining the sales process and improving accuracy.

❖ **Feature Category:**

Core Functionality.

❖ **Pre-Requisites:**

Enable Parameter "Block SO creation for non-accepted line items of Sales Quotation."

❖ **Navigation:**

Sales and Shipping → Quotation Acceptance → Maintain Quotation Acceptance

❖ **Screenshot:**

Update Delete

❖ **Business Scenario:**

Due to various market fluctuations/ govt regulations numerous sales price components might need to modified & executed within a day. In such cases, updating & approving one at a time is too tedious. This bulk update & bulk approve feature will save time & effort for numerous customer users.

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Schedular based Short closure of NSO where it matches with the Negative Shipping tolerance specified in item master.**❖ **Description:**

In case of many despatches there are cases of numerous short despatches with low balance quantities. Such short quantity balance orders accumulate over a period of time & create confusion to users. Hence this feature requirement of auto short closure of Sale Orders with less balance quantity has been necessitated. Those orders, which has balance quantity less than specific item's negative tolerance [all items of the order] are picked for Short closure via SQL Job.

X. Sales and Shipping

❖ Sales Return Credit Note based on Replacement Date

❖ Summary:

Auto generation of Sales Return Credit Note based on Replacement Date.

❖ Feature Category:

Usability.

❖ Prerequisites:

Functional parameter settings

❖ Description:

Users can use the direct option to enter returned materials on the application's sales return screen. The returned items are sent for quality control, and it takes time to determine the underlying cause. The sales return enters an authorization state following quality control, currently the application automatically generates the credit note.

The credit note is currently generated using the sales return date; however, if the functional parameter 'Credit note based on the replacement date in sales return' is enabled, then the credit note will be generated using the replacement date rather than the sale return date.

❖ How to Use?

- Launch Additional Parameter screen from Set Function Parameters Activity from Sales Return Business Component and it should be set as Yes.
- Create a Sales Return by selecting Replacement mode as Credit Note from Create Sales Return Activity of Sales Return Business Component.
- Edit Sales Return by giving Replacement Date as Future Date and Check for error validation added for the future replacement date on Edit Sales Return Screen of Sales Return Business Component.
- Authorize the Sales Return in Authorize Sales Return Activity of Sales Return Business Component.

❖ Navigation:

Sales and Shipping → Sales Return → Set Function Parameters

Sales and Shipping → Sales Return → View Function Parameters

Sales and Shipping → Sales Return → Create Sales Return

Sales and Shipping → Sales Return → Edit Sales Return

Sales and Shipping → Sales Return → Authorize Sales Return

❖ **Screenshot / Report format:**

#	Feature Desc.	Flag
1	☐ Allow to do return of Non Capital Returnable Containers through Sales Return component with Finance Book Postings.	NO
2	☐ Defaulting Ref Doc OU as Login OU.	NO
3	☐ Unit Price to be Defaulted based on Return UOM.	NO
4	☐ Consider weighted average cost as return rate, based on costing method.	NO
5	☐ Credit note based on the replacement date in sales return	YES
6	☐ Block Notes Modification after Final Status for Sales Return	NO
7	☐	YES

❖ **Business Scenario:**

Facilitates auto generation of sales return credit note based on replacement date subject to parameter settings.

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Provision to View all the debit credit documents of Customer & Provision to View Customer Ledger and Ageing Report**❖ **Summary:**

Provision to view the debit credit notes in Customer portal. Also, provision to launch Customer Ledger and customer ageing report

❖ **Feature Category:**

Usability.

❖ **Prerequisites:**

Login User to be mapped to the customer code.

❖ **Description:**

Customer can check all the Debit and credit notes against them in the Customer Portal. Further, the customer Ageing Report and Customer sub ledger balance report for the Customer mapped to the user can also be launched and viewed.

❖ **How to Use?**

- Launch Customer Portal and execute search
- All the Debit/Credit documents fetched in the grid
- Launch Customer Ledger Link to view the Customer subledger balance

➤ Launch Customer Ageing Link to view the Customer Ageing Report

❖ **Navigation:**

Sales and Shipping → Customer Portal → View Payment Information

❖ **Limitation:**

Nil.

❖ **Other Impact:**

Nil.

❖ **Management of Unit Warranty in Pack Slip processing**

❖ **Summary:**

If item being shipped is a warranty enabled serial controlled item, option available to auto generate the unit parametrically based on customer and ship to ID. For auto generation of unit, rule can be set as 'Item-Variant-Serial Number Combination' or 'Serial Number.' Default cost center and work group defined in unit function parameters will be utilized for auto generation. The number of auto generated units will be equal to quantity of warranty enabled serial controlled item that is getting shipped. Based on warranty days and ship date, warranty end date of auto generated units will be displayed. In addition to this, update to warranty end date of units can be set to happen based on completion of associated installation service work order.

❖ **Feature Category:**

Usability.

❖ **Prerequisites:**

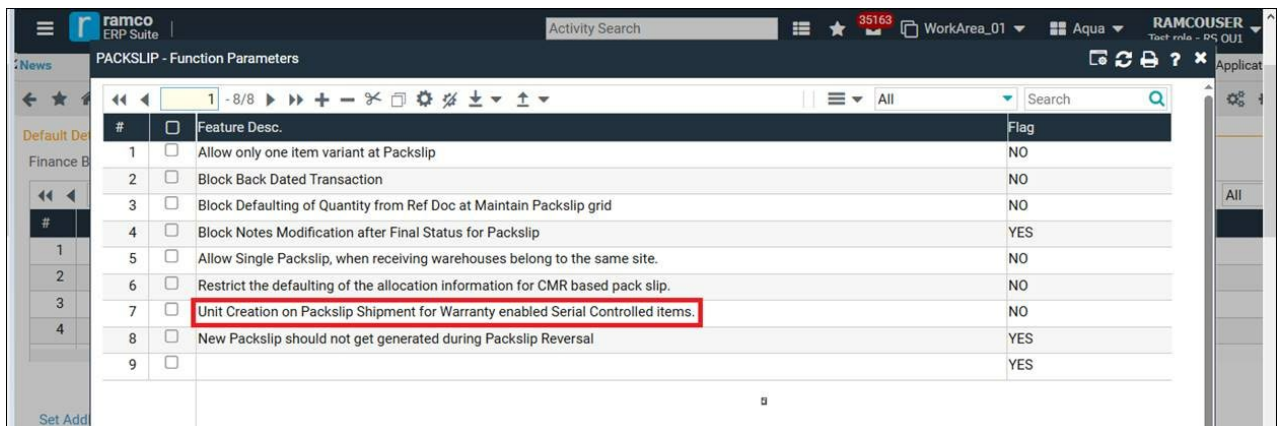

Item should be serial controlled and warranty should have been enabled in sale order.

❖ **Description:**

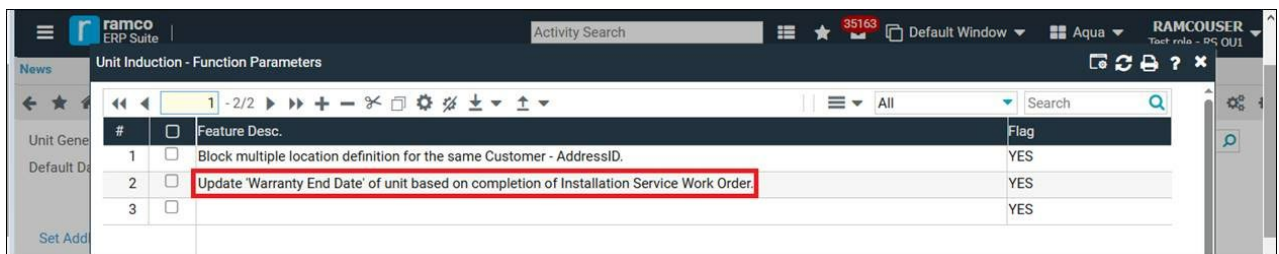

Nil

❖ **Navigation:**

Sales and Shipping > Pack Slip > Maintain Pack Slip

❖ **Screenshot / Report format:**

#	Feature Desc.	Flag
1	Allow only one item variant at Packslip	NO
2	Block Back Dated Transaction	NO
3	Block Defaulting of Quantity from Ref Doc at Maintain Packslip grid	NO
4	Block Notes Modification after Final Status for Packslip	YES
5	Allow Single Packslip, when receiving warehouses belong to the same site.	NO
6	Restrict the defaulting of the allocation information for CMR based pack slip.	NO
7	Unit Creation on Packslip Shipment for Warranty enabled Serial Controlled items.	NO
8	New Packslip should not get generated during Packslip Reversal	YES
9		YES

#	Feature Desc.	Flag
1	Block multiple location definition for the same Customer - AddressID.	YES
2	Update Warranty End Date' of unit based on completion of Installation Service Work Order.	YES
3		YES

❖ **Business Scenario:**

If units need to be covered under warranty automatically after shipment or after completion of installation service work order, service item and serial controlled items (unit) can be included in sale order.

❖ **Limitation:**

Nil

❖ **Other Impact:**

Nil

❖ **Enable to create multiple quotation with same Customer, same item code and same need date's.**❖ **Description:**

Customer needs to be issued multiple quotations at same time, but the system validates the quotation between valid dates.
