

Version 6.7

Release Section

Service Pack Installation Pre-Requisites:

1. Ramco VirtualWorks Runtime installed.
2. Before running the SP deliverables, the Latest RT patch is to be applied in an existing environment. (Relevant RT patch is available in CD1.)

Note: Refer to “Readme.txt” for RT consolidation hotfixes.
3. Follow the steps provided to perform the Prerequisites for Single Installer Application Package. **(Refer to Section 3).**
4. Service pack deliverables can be applied only on the existing **RES 6.6 Service Pack** environment [DB, APP, and WEB].
5. During the Service pack Installation process, the “IIS Service” should be stopped.

Reach out to your respective Customer Success Manager or write to us at RES@ramco.com to know more about the Service Pack.
